

## ADVANTAGES OF MOV EXTRA GREASE

### Performance

- T Very good low temperature mobility and low bearing torque.
- T Outstanding corrosion protection.

### Wear Resistant Characteristics

- T Much better results than many of the current products.
- T Extreme pressure characteristics without zinc additives.

### Stability

- T More resistant to the age hardening than calcium complex greases.
- T Excellent resistance to changes in consistency.
- T Excellent corrosion protecting capabilities.
- T Excellent resistance to oil separation and water washout.
- T Excellent results in the roll stability test.

### Safety and Environmental Issues

- T Contains no artificial colouring agents.
- T Contains no added lead, zinc or chlorinated substances.
- T Manufactured in a [Responsible Care](#) member facility.

### Compatibility

- T Generally compatible with both calcium complex and lithium complex based greases.

### Multipurpose

- T Can be considered a multipurpose grease so it can often be effectively utilized in other applications.

### Quality Issues

- T Based on proven technology that has been in use for over 10 years.
- T Manufactured in an ISO 9002 registered plant.
- T Produced by one of North America's largest manufacturers of greases.
